

HUNGRY BIRD

Complete Product, Website & Mobile Application Documentation

Jaipur-first Hyperlocal Street Food Discovery Platform

Version: 1.0 | Product baseline: August 2026

Launch geography: Jaipur, Rajasthan → Rajasthan → India

Product direction: StreeFi-style hyperlocal discovery, implemented with Hungry Bird's own brand, UX, data model and feature set.

Reference website reviewed: <https://hungry-bird-gamma.vercel.app/>

1. Document Purpose

This document is the master specification for redesigning Hungry Bird across web and mobile. It defines the product vision, users, feature requirements, screens, navigation, database, APIs, admin system, vendor workflows, moderation, monetization, analytics, security, design system, launch plan and future expansion.

The document is intentionally implementation-oriented: a UI/UX designer, frontend developer, backend developer, QA engineer and product owner should be able to work from it without redefining the product from scratch.

2. Product Definition

One-line definition:

Hungry Bird is a community-powered hyperlocal food discovery platform that helps people discover street-food vendors, hidden gems, local favourites and authentic food experiences, starting with Jaipur.

Core promise:

Find the food locals know about — before everyone else discovers it.

Business model:

- Free local discovery to build network effects and usage.
- Paid curated guides/food trails beginning with a ₹49 product.
- Future vendor tools, sponsored placements and creator partnerships only with clear commercial labelling.

3. Product Principles

- Discovery first — the product should help users decide where to eat.
- Jaipur first — launch deeply in one city instead of shallowly across India.
- Map + list — location is central to street-food discovery.
- Trust over popularity — ratings alone do not define a hidden gem.
- Community-powered, admin-moderated — anyone can contribute; not everything publishes automatically.
- Free basic discovery — never make users pay merely to see a normal vendor location.
- Mobile-first — most discovery happens while users are outside.
- Own identity — use the category concept as inspiration, not another company's branding, code or content.
- Scalable geography — the architecture must support cities, areas and states from day one.

4. Launch Scope

5. Target Users & Roles

6. Information Architecture

Web primary navigation:

- Home
- Explore
- Map
- Hidden Gems
- Food Trails
- City Guides
- Community
- Premium
- Profile

Mobile bottom navigation:

- Home
- Explore
- Map
- Saved
- Profile

Secondary navigation:

- Notifications
- Submit Vendor
- My Reviews
- My Contributions
- My Guides
- Settings
- Help & Support
- Legal

7. Discovery Categories

8. Website Specification

8.1 Home Page

Goal: communicate the product in seconds and move users into discovery.

The current Hungry Bird website already includes city selection, legendary specialties, food categories, reels, vendor submission, verified-gem content and city guides; these should be reorganized into the above product architecture rather than discarded.

■cite■turn0view0■

8.2 Explore Page

- Search field with vendor/dish/area/intent search.
- Category chips.
- Filter drawer.
- List/grid toggle.
- Sort by relevance, distance, rating, Hidden Gem Score, price, newest.
- Pagination/infinite scroll.

- Vendor cards with image, name, category, rating, price, distance and badges.

8.3 Map Page

- Full-screen map.
- Search and location control.
- Category/filter chips.
- Vendor clusters at zoomed-out levels.
- Selected vendor bottom sheet/card.
- Open directions.
- Re-center on current location.
- Map/list synchronization.
- Do not expose exact location for vendors where a public stall location is unsafe or uncertain; show a verified public point when appropriate.

8.4 Hidden Gems Page

- Intro explaining what qualifies as a Hidden Gem.
- Filters by area, price, cuisine and distance.
- Hidden Gem Score.
- Verified Gem badge where verification criteria are met.
- Curator note.
- What to order.
- Last verified date.

8.5 Vendor Detail Page

8.6 Search

- Vendor search.
- Dish search.
- Cuisine search.
- Area/locality search.
- Intent search: “cheap food”, “late night”, “breakfast”.
- Combined search: “momos under ₹100 near me”.
- Autocomplete and recent searches.
- No-result screen with nearby alternatives and submission CTA.

8.7 Food Trail Page

- Trail title and cover.
- Duration.
- Approximate total budget.
- Number of stops.
- Start/end location.
- Map route.
- Each stop: vendor + signature item + expected spend + visit duration.
- Save/share trail.
- Premium trail can unlock detailed insider notes.

8.8 City Guide Page

- Jaipur guide overview.
- Breakfast guide.
- Street-food guide.
- Rajasthani food guide.
- Budget guide.
- Late-night guide.
- Hidden-gem guide.
- Area-specific guides.

9. Mobile Application Specification

The mobile application is the primary field-discovery product. Design for Android first, while keeping iOS compatibility in the architecture.

9.1 Mobile Bottom Navigation

9.2 Mobile Screens

1. Splash / app initialization
1. Onboarding
1. Location permission
1. Home
1. Search
1. Search results
1. Explore categories
1. Map
1. Vendor quick card
1. Vendor details
1. Food item details
1. Hidden Gems
1. Food Trail
1. City Guide
1. Video/Reels
1. Login
1. Register
1. OTP verification
1. Forgot account
1. Saved places
1. Review submission
1. Vendor submission
1. My contributions
1. Contributor profile
1. Notifications
1. Premium product

- 1. Checkout
- 1. Purchase success
- 1. My premium content
- 1. Settings
- 1. Help
- 1. Report problem

9.3 Onboarding

- Welcome screen.
- Select city/location.
- Optional food preferences.
- Optional budget preference.
- Optional notification permission.
- Do not force registration before basic exploration.

9.4 Mobile Vendor Quick Card

- Image.
- Vendor name.
- Rating.
- Price.
- Distance.
- Open/closed indicator.
- One signature dish.
- Badges.
- Quick actions: Save, Directions.

9.5 Mobile Review Flow

- 1. Open vendor.
- 1. Tap Review.
- 1. Overall rating.
- 1. Taste.
- 1. Value.
- 1. Quantity.
- 1. Optional service/hygiene perception.
- 1. Select what was ordered.
- 1. Upload photo.
- 1. Write review.
- 1. Submit.

Do not present a user-submitted hygiene score as official food-safety certification.

10. Authentication & Account

- Guest browsing supported.
- Phone OTP recommended for Indian audience.
- Email/password optional.

- Google/Apple login can be added later.
- User profile: name, photo, city, saved places, reviews, contributions, badges.
- Account deletion and data export/request workflows.

11. Vendor Submission & Claiming

11.1 Public Submission Form

11.2 Workflow

1. Submitted
1. Automated validation
1. Duplicate/nearby match check
1. Moderator review
1. Verify location/details
1. Publish
1. Periodic re-verification

11.3 Vendor Claim

- Vendor searches for existing profile.
- Requests claim.
- Provides verification information.
- Admin reviews claim.
- Claimed profile can update eligible business data.
- Commercial promotions remain separate from editorial rankings.

12. Hidden Gem Framework

Hidden Gem must be a controlled product label, not an arbitrary marketing tag.

Recommended badges: Verified Gem, Local Favourite, Budget Pick, Must Try, New Find, Legendary, Late Night.

A high rating does not automatically make a famous restaurant a Hidden Gem.

13. Community & Gamification

- Contributor profile.
- Contribution count.
- Reviews.
- Vendor discoveries.
- Photos.
- Badges.
- Optional points system.
- Leaderboards should be city-specific and quality-weighted, not simply based on spam volume.

14. Monetization & ■49 Premium

Basic vendor discovery, map access and normal profiles remain free.

MVP monetization recommendation: launch only one ■49 product first.

14.1 Purchase Flow

1. User opens premium guide.
1. Preview shows title, number of places, sample content and price.
1. Tap Buy ■49.
1. Checkout.
1. Payment verification.
1. Entitlement created.
1. Guide unlocked.
1. Purchase appears in My Premium.

14.2 Premium Data Model

- premium_products
- premium_content
- orders
- payments
- user_entitlements
- refunds
- access_logs

15. Admin Web Dashboard

16. Database Design

17. API Specification

18. Technical Architecture

19. Security, Privacy & Abuse Prevention

- Hash passwords using a modern password hashing algorithm if passwords are used.
- Never store raw payment card data.
- Verify payment webhooks server-side.
- Rate-limit OTP, login, review and submission endpoints.
- Validate uploads and restrict file types/sizes.
- Sanitize user-generated content.
- Role-based admin permissions.
- Audit sensitive admin changes.
- Do not expose private user information publicly.
- Provide account deletion and privacy controls.
- Protect exact personal locations and contributor contact data.

20. Design System

21. UI State Requirements

- Loading state.
- Empty state.
- Error state.
- Offline/poor network state for mobile.
- Location denied.
- Location unavailable.
- Vendor closed.
- Vendor temporarily closed.
- Vendor permanently closed.
- Vendor unverified.
- No search results.
- Payment pending.
- Payment failed.
- Premium access granted.
- Submission pending moderation.

22. Notifications

- Nearby hidden gem (permission-based).
- Saved vendor changed hours/status.
- Review approved/removed.
- Vendor submission approved.
- Contributor badge earned.
- New guide for selected city.
- Premium purchase confirmation.
- Payment failure/refund.
- Do not spam location notifications; give granular controls.

23. Analytics & KPIs

Track event metadata such as city, category, source screen, vendor ID, distance band and logged-in/guest status while respecting privacy.

24. QA & Acceptance Testing

25. Website SEO & Public Pages

- Each vendor should have a crawlable public URL.
- Example: `/jaipur/vendor/{slug}`.
- Each city guide should have a crawlable URL.
- Example: `/jaipur/guides/{slug}`.
- Each category should have an indexable page where useful.

- Use unique title, description, canonical URL, Open Graph image and structured data.
- Create sitemap and robots.txt.
- Do not index private premium content without access control.

26. Content & Data Operations

- Start Jaipur data collection by area.
- Prioritize high-footfall food streets and neighbourhood clusters.
- Use real photos and accurate prices.
- Record source and verification date for each important field.
- Schedule re-verification of hours, prices and location.
- Maintain a closed/moved vendor history instead of deleting records.

27. Jaipur Launch Strategy

Example Jaipur area coverage can include C-Scheme, MI Road, Raja Park, Vaishali Nagar, Malviya Nagar, Mansarovar, Bapu Bazaar, Johari Bazaar, Ramganj, Vidyadhar Nagar and other relevant clusters; finalize the operational list based on actual vendor density and verification capacity.

28. Development Roadmap

29. Suggested Project Structure

hungry-bird/ ■■■ web/ ■■■ app/ ■■■ components/ ■■■ pages/ ■■■ services/ ■■■ public/ ■■■ mobile/ ■■■ screens/ ■■■ components/ ■■■ navigation/ ■■■ services/ ■■■ state/ ■■■ backend/ ■■■ app/ ■■■ models/ ■■■ routes/ ■■■ services/ ■■■ auth/ ■■■ payments/ ■■■ admin/ ■■■ migrations/ ■■■ tests/ ■■■ docs/

30. Key Business Rules

1. Guest users can discover public vendor information.
1. A vendor submission is not automatically a verified vendor.
1. Only authorized moderators can mark a vendor Verified.
1. Hidden Gem status must be based on defined signals/curation.
1. Sponsored placement must never silently affect editorial scores.
1. Vendor location must be verified before being promoted as a verified discovery.
1. Reviews can be edited only under defined rules and must retain moderation history.
1. Premium access is granted only after server-side payment confirmation.
1. Refunded/cancelled purchases lose access according to the refund policy.
1. Closed vendors remain in the database with an appropriate status.

31. Future Features

- AI natural-language food search.
- Personalized recommendations.
- Food passport / visited places.
- Creator marketplace.
- Vendor analytics dashboard.
- Vendor offers/coupons.

- Food events.
- Offline saved city maps.
- Multilingual support.
- Tourist food itineraries.
- Restaurant/street-stall booking where relevant.

32. Definition of Done for MVP

- Jaipur is the default launch city.
- User can browse without login.
- User can search by vendor, dish and area.
- User can discover vendors on map.
- Vendor profiles contain structured information.
- User can save a vendor.
- User can submit a vendor.
- Admin can approve/reject/verify submissions.
- User can review a vendor.
- User can report incorrect vendor data.
- Hidden Gem Score is implemented.
- Mobile and website share the same backend/data.
- Basic analytics are installed.
- Privacy/terms/reporting flows exist.
- System can add a second city without changing the core data model.

33. Final Product Blueprint

The final Hungry Bird product should feel like a local food map, a community recommendation network and a curated city food guide in one. The free experience builds scale through vendor discovery, map usage, reviews and community submissions. The trust layer turns raw listings into verified local knowledge. The **49** layer packages that knowledge into useful experiences such as hidden-gem collections and food trails.

The launch strategy is intentionally Jaipur-first. Build the technical architecture for multiple cities, but make Jaipur the first city where Hungry Bird has depth, accuracy and a recognizable community.

34. Current Website Baseline

The current Hungry Bird site already contains the following visible concepts: "Discover. Explore. Eat Local.", hidden street-food discovery, city selection, legendary specialties with categories such as Chaat/Meals/Snacks/Sweets, short-form food videos, vendor submission, a verified-gem presentation, Jaipur/Delhi/Mumbai guide links, legal pages and newsletter capture. These existing concepts are retained as inputs to the redesign, but the new specification adds a structured map-first experience, mobile app architecture, community workflows, verification, premium content, analytics and scalable city data.

Source: current Hungry Bird website. **■cite■turn0view0■**

35. Reference & Research Notes

Hungry Bird current website: <https://hungry-bird-gamma.vercel.app/>

Market reference: StreeFi-style hyperlocal street-food discovery. The product should be independently designed and implemented; do not copy another service's proprietary UI, code, brand assets or content.

This specification is a product blueprint, not legal advice and not a guarantee of third-party platform feature parity.

Appendix — Product Tables

Stage	Geography	Primary objective
MVP	Jaipur	Validate discovery, vendor data and community submissions
Phase 2	Jaipur + more verified vendors	Build trust, reviews and contributor network
Phase 3	Jodhpur, Udaipur, Kota, Ajmer, Bikaner, Pushkar	Prove city expansion model
Phase 4	Rajasthan	Become Rajasthan-focused food discovery platform
Phase 5	Selected Indian cities	Expand using repeatable city launch playbook

Role	Description	Key permissions
Guest	Can browse without account	Search, map, vendor profiles, basic guides
Registered User	Food explorer	Save, review, submit vendors, report data
Contributor	Active community member	Higher contribution limits, badges, profile
Food Creator	Creates food content	Creator profile, videos, linked discoveries
Vendor	Business owner/operator	Claim profile, submit updates, manage eligible information
Curator	Trusted Hungry Bird reviewer	Review/verify gem candidates, curate guides
Moderator	Content/data quality role	Moderate submissions, reviews, reports
Admin	System owner	Full management, analytics, users, payments, settings

Category	Purpose	Example
Hidden Gems	Underrated, locally recommended places	Small kachori stall in a neighbourhood
Local Favourites	Strong local recommendation	Area's favourite breakfast
Street Food	General street-food discovery	Pani puri, momos, pav bhaji
Rajasthani	Local cuisine	Dal baati, pyaz kachori, ghewar
Under ₹50	Budget discovery	Snacks and drinks
Under ₹100	Budget meal/snack discovery	Street-food combos
Must Try	Signature dishes/places	One dish worth visiting for
Breakfast	Morning vendors	Kachori, poha, chai
Late Night	Night-time options	Open after 10 PM
Sweets & Desserts	Sweet discovery	Ghewar, kulfi, jalebi
Chai & Snacks	Tea/snack vendors	Chai, samosa, bun maska
New Finds	Recently added/verified	Newly discovered stall
Legendary	Established local institutions	Long-running famous vendor

Section	Required content	Primary action
Header	Logo, location, search, login/profile	Search / change location
Hero	Jaipur-focused discovery statement	Explore nearby
Quick categories	Hidden Gems, Under ₹50, Near Me, Must Try	Open category
Nearby map preview	Map + selected vendor cards	Open map
Hidden Gem of the Day	Photo, score, dish, price	View vendor
Trending nearby	Popular discoveries	Explore
Budget finds	₹50/₹100 cards	View all
Food Trails	Curated routes	View trail

Section	Required content	Primary action
City Guide	Jaipur collections	Open guide
Community	Recent submissions/stories	Contribute
Video	Short food content	Watch
CTA	Know a hidden place?	Submit vendor
Footer	Explore, legal, support, social	Navigate

Block	Fields
Hero	Cover photo, vendor name, badges, rating, save/share
Location	Address, landmark, map, directions
Timing	Open/closed, hours, best time
Food	Signature dish, categories, dietary tags
Pricing	Typical price, range, price level
Trust	Hidden Gem Score, verification, last verified
Description	Why people visit, vendor story
Menu	Dish cards, prices where available
Reviews	Rating breakdown, recent reviews, photos
Community	Contributors, visits, saves
Actions	Directions, save, review, report

Tab	Purpose
Home	Personalized nearby discovery
Explore	Search, categories, filters
Map	Map-first vendor discovery
Saved	Saved vendors, trails and guides
Profile	Account, contributions, reviews, settings

Field	Required	Notes
Vendor name	Yes	Duplicate detection
Location	Yes	Map pin + address
Food type	Yes	Category
Signature dish	Yes	What it is known for
Price	Recommended	Approximate range
Opening hours	Recommended	Can be verified later
Photos	Recommended	Real photos preferred
Description	Recommended	Why it is worth visiting
Submitter contact	Yes for moderation	Not necessarily public

Signal	Weight
Food quality	30%
Local recommendations	20%
Discoverability / low mainstream visibility	15%
Value for money	15%
Uniqueness	10%
Trust/data confidence	10%

Badge	Requirement example
Food Explorer	First 5 quality contributions
Jaipur Foodie	10 approved contributions
Local Food Hunter	5 approved hidden-gem discoveries
Gem Hunter	10 verified hidden-gem contributions

Product	Price	Content
Jaipur Hidden Gems	■49	15–20 curated places, what to order, insider notes, map
Jaipur Food Trail	■49	Route, stops, dishes, budget, timing
City Starter Guide	■99 later	Multiple curated categories
Explorer Pass	■199 later	Multiple premium collections

Module	Functions
Dashboard	KPIs, pending work, alerts
Vendors	Create/edit/approve/reject/verify/suspend
Submissions	Review public submissions
Reviews	Moderate/report/spam actions
Users	Roles, status, contribution history
Cities	Cities, areas, launch status
Categories	Category/tag management
Hidden Gems	Score review, curator notes, verification
Guides	Create/publish city guides
Trails	Create routes and stops
Media	Photos/videos moderation
Payments	Orders, refunds, premium access
Reports	Incorrect location, closed vendor, abuse
Analytics	Discovery, engagement, conversion
Settings	App configuration, legal, feature flags
Audit Logs	Admin activity history

Table	Important fields
users	id, name, phone/email, avatar, city_id, role, status, created_at
cities	id, name, state, country, slug, center_lat, center_lng, status
areas	id, city_id, name, slug
vendors	id, name, description, status, claimed, verification_status
vendor_locations	vendor_id, address, area_id, lat, lng, landmark
vendor_hours	vendor_id, day, open_time, close_time, closed
food_items	id, vendor_id, name, description, price, signature
categories	id, name, slug, icon, status
vendor_categories	vendor_id, category_id
vendor_media	vendor_id, url, type, caption, approved
reviews	id, user_id, vendor_id, rating, taste, value, text, visit_date
review_media	review_id, url, type
favorites	user_id, vendor_id
vendor_submissions	submitter_id, vendor_id, payload, status
vendor_verifications	vendor_id, method, verified_by, verified_at, notes

Table	Important fields
reports	reporter_id, vendor_id/review_id, type, status
food_trails	id, city_id, title, description, price, premium
food_trail_stops	trail_id, vendor_id, sequence, dish, duration
city_guides	id, city_id, title, description, premium
guide_items	guide_id, vendor_id, sequence, curator_note
premium_products	id, title, price, type, status
orders	id, user_id, product_id, amount, status
payments	order_id, gateway, transaction_id, status
entitlements	user_id, product_id, order_id, active_until
notifications	user_id, type, title, body, read
audit_logs	actor_id, action, entity, entity_id, metadata

Method	Endpoint	Purpose
GET	/api/cities	List cities
GET	/api/cities/{city}/areas	List areas
GET	/api/vendors	Vendor search/filter
GET	/api/vendors/{id}	Vendor detail
GET	/api/vendors/nearby	Nearby vendors
GET	/api/vendors/hidden-gems	Hidden gems
GET	/api/vendors/trending	Trending vendors
GET	/api/search	Global search
POST	/api/vendors/submit	Submit vendor
POST	/api/vendors/{id}/claim	Claim vendor
POST	/api/vendors/{id}/favorite	Save vendor
POST	/api/vendors/{id}/report	Report vendor
POST	/api/reviews	Create review
GET	/api/vendors/{id}/reviews	Vendor reviews
GET	/api/trails	Food trails
GET	/api/trails/{id}	Trail detail
GET	/api/guides	City guides
GET	/api/premium/products	Premium products
POST	/api/orders	Create order
POST	/api/payments/webhook	Payment confirmation
GET	/api/me/entitlements	Purchased content
GET	/api/me/saved	Saved content

Layer	Recommended
Web	Next.js/React or current frontend stack
Mobile	Flutter or React Native for one cross-platform codebase
Backend	Existing Flask + REST API can continue
ORM	SQLAlchemy
Database	PostgreSQL
Maps	Google Maps Platform or Mapbox
Authentication	Phone OTP + secure session/JWT
Payments	India-compatible payment gateway with webhook verification

Layer	Recommended
Storage	Object storage + CDN
Search	PostgreSQL full-text initially; dedicated search later
Hosting	Vercel for web; managed backend/database
Monitoring	Error tracking + server logs + uptime monitoring

Element	Requirement
Brand	Hungry Bird logo, distinctive bird/food identity
Typography	High-legibility mobile-first type scale
Colors	Warm food-oriented palette with accessible contrast
Cards	Image + vendor + price + rating + badges
Buttons	One clear primary CTA
Chips	Category, price, dietary, distance and badge filters
Map pins	Category-aware but simple
Icons	Consistent icon set
Images	Real vendor/food imagery preferred
Loading	Skeleton states
Errors	Human-readable recovery instructions
Empty states	Helpful alternative discovery

Event/KPI	Definition
Active users	DAU/WAU/MAU
Searches	Number of discovery searches
Vendor views	Profile opens
Directions	Directions CTA clicks
Saves	Vendor/trail saves
Reviews	Approved reviews per active user
Submissions	Vendor submissions
Verification rate	Approved submissions / submissions
Repeat discovery	Users returning to explore
Premium conversion	Purchasers / premium viewers
Guide completion	Users consuming guide content
Retention	D1/D7/D30 return

Area	Acceptance criteria
Search	Relevant results, typo tolerance, empty state
Map	Correct pins, clusters, current location, directions
Vendor	Accurate fields, photos, timing and actions
Reviews	Validation, moderation, duplicate/spam handling
Submission	Validation + pending status + admin workflow
Auth	OTP/login/logout/account deletion
Payments	Success/failure/pending/refund/webhook handling
Premium	Entitlement only after verified payment
Admin	Role permissions and audit logs
Mobile	Responsive layouts, network loss, permission denial
Accessibility	Readable text, contrast, labels, touch targets

Step	Action
1	Select 10–15 Jaipur areas
2	Seed initial vendor dataset
3	Verify high-priority vendors
4	Launch map + vendor profiles
5	Recruit first local contributors
6	Launch Hidden Gems
7	Collect reviews and corrections
8	Launch first ■49 guide
9	Measure repeat discovery and conversion
10	Expand to next Jaipur areas before adding another city

Phase	Deliverables
0 — Product setup	Design system, architecture, database, roles
1 — Discovery MVP	Home, Explore, Search, Map, Vendor profile
2 — Community	Auth, reviews, submit vendor, report
3 — Trust	Verification, Hidden Gem Score, admin moderation
4 — Mobile	Android/iOS core flows, location, push
5 — Content	City Guides, Food Trails, creator content
6 — Monetization	■49 premium, checkout, entitlements
7 — Optimization	Recommendations, analytics, performance
8 — Expansion	Repeatable city onboarding
